

Drone Harmony

Drone Harmony was founded in 2016 by a team of problem solvers with a passion for drones, software and automation. From our very early days, we have set out to tackle the mathematical and engineering challenges of enabling cost-effective deployment of drone technology in industries, where existing technologies were unable to deliver.

Since then, we have reached several pivotal milestones, including the development of a **market-first 3D automatic mission planning platform**, recognized by our many users and partners as the most suitable for complex commercial uses. This platform is the basis of the Drone Harmony Mission Planner as well as Drone Harmony's array of products tailored for specific **industrial applications** ranging from cell tower inspections, to open-pit mine mapping.

Partnerships

Drone Harmony partnered with **Bentley Systems** to combine its flight planning technology with the market leading reality modelling solution **ContextCapture**. Furthermore, together with partners in the inspection industry Drone Harmony develops and deploys automated flight planning solutions across **various industries**, ranging from inspection of **cell towers, pipelines, mines** to **mapping of roads** and many more to come.

Team

- **CEO:** Dr. Martin Fuchsberger
- **Chief Scientist:** Dr. David Adjashvili
- **CTO:** Gil Adjashvili
- **VP Business Development:** Haim Volinsky
- **Marketing Manager:** Jeannine Stoll
